[PDF] 338 2011 An Introduction To Survival Analysis Using Free Ebook and Audio Book of Introduction To Probability Models Solutions Manual 10th

3 the survivor function or survivorship function, $s(t)$, is the complement to the cdf and is defined as follows: $s(t) = 1 - F(t)$ for continuous time; or $s(t) = \prod_{s \leq t} (1 - F(s))$ for discrete time. The value of the survivor function for an individual is the probability that the event has not yet occurred at time t (continuous) or prior to the close of observation period m (discrete time).
